OIA RFQ 5302 Demo Voiceover Script

Natural English · about 9 to 11 minutes · https://oia-rfq-5302.surge.sh

For recording Talk like you're walking someone through the screen. Skip lines in parentheses. Pause where marked.

1 · Opening · about 45 seconds

(landing page)

> This is our hiring assistant demo.
>
> You can click through the whole process. A person applies. HR reviews them. A human makes the final yes or no. Every action is saved.
>
> Two rules here. Job seekers and HR use different screens. The interview runs offline on local computers. Data stays inside the country.
>
> The four cards show what we care about. Local data. Offline interview. English and Arabic. HR makes the final call, not the AI.

pause two seconds

2 · Network light · about 25 seconds

(click the status light)

> This light shows if we are online or offline.
>
> During the interview, outside internet is turned off. The AI runs locally.
>
> Green means connected. Yellow means offline. Both sides see the same light.

pause one second

3 · Apply · about one minute

(candidate side, upload, confirm, submit)

> We start on the job seeker side.
>
> They log in and upload a CV. The system reads name, email, work history, and other fields.

> Green means OK. Yellow means please check. Red means missing. Click Evidence to see where each value came from in the CV.
>
> Confirm the fields and press Submit.

pause one second

4 · CV update · about 30 seconds

(before and after table)

> If they upload a new CV, we show old and new side by side.
>
> Changed fields are highlighted. They must press Accept. Nothing updates without that click.

pause one second

5 · Test · about 45 seconds

(questions, submit, score)

> Next is a short test for the job.
>
> Questions show in English and Arabic. They pick answers and submit. The score appears right away. They can see which answers were wrong.
>
> They only see their own score.

pause one second

6 · AI interview · about one minute

(interview flow)

> This is the AI interview.
>
> First English. The avatar asks a follow-up. Then Arabic. Then Submit. HR gets the recording. The job seeker does not.
>
> The photo and text on the left are stand-ins. The real system will use voice and moving lips.
>
> Job seekers never see their rank or other people in the pool.

pause two seconds

7 · Job seeker status · about 20 seconds

(score page, exit)

> They can see their match score and status. They cannot hire or reject anyone. We leave and open the HR side.

pause one second

8 · HR dashboard · about one minute

(HR home screen)

> HR uses a different login and different screens.
>
> Here we see six people ranked by fit. We can filter by skill, years, or degree. We can export to Excel.
>
> Click a score to see why. Sara is at ninety-eight percent because we can point to lines in her CV. Not a hidden number.

pause one second

9 · Shortlist · about 30 seconds

(type reason, shortlist)

> To move someone forward, HR must type a reason and press Shortlist. AI suggests. A person decides.

pause one second

10 · Watch interview · about 45 seconds

(play back recording)

> HR can watch the interview again. Photo, text, and full chat in English and Arabic. Press Play or click one line to jump.
>
> Job seekers cannot open this page.

pause two seconds

11 · Final yes or no · about 40 seconds

(hire or reject, confirm)

> Last step. Hire or reject.
>
> The screen shows an AI suggestion. HR picks Hire or Reject, writes why, and confirms. The system does not hire anyone by itself.

pause one second

12 · Activity log · about 50 seconds

(big table, export)

> This table lists who did what and when. We can export it to a file.
>
> The bottom page sums up the demo. Two separate screens. Clear scores. Human decisions. Two languages. Full history.

pause two seconds

13 · End · about 30 seconds

(closing screen)

> That is the full demo. The real product will connect to Jadarah, run local AI, and use a live avatar. Thank you.
