OIA AI Recruitment Assistant

Demo Teleprompter (English) - RFQ 5302

Duration: ~5 minutes | URL: http://localhost:5180/ | Tip: Hard refresh once before the meeting (Cmd+Shift+R).

Opening (~20 sec)

This is a clickable prototype for OIA RFQ 5302 - AI-assisted recruitment. Two portals: Candidate and HR, fully separated. The interview segment runs offline with local inference.

Part 1 - Candidate Portal (~2 min)

[Click Candidate portal -> Enter application (offline-ready)]

C1 - Apply & Parse CV

[Upload CV -> Review fields -> Submit profile]

CV parsing with evidence-linked fields. In production this writes back to Jadarah.

C2 - CV Update Confirmation

[Accept & continue]

Candidate must confirm CV updates - nothing is overwritten silently.

C3 - Assessment

[Answer all MCQs -> Submit exam]

Role-specific assessment, auto-scored.

C4 - AI Avatar Interview

[Start -> English answer -> Continue to Arabic -> Arabic answer -> Submit interview]

Bilingual avatar interview. Recording is saved for HR review only. Candidate never sees match scores or other applicants.

C5 & C6 - Score & Status

[Briefly show tips & status -> Exit portal]

Part 2 - HR / Recruiter Portal (~2 min)

[Click HR portal - demo data loads automatically]

H1 - Matching Dashboard

[Show KPI cards, ranked table, dimension bars -> click evidence -> Export CSV]

Explainable matching with scores, filters, and evidence drill-down - not a black box.

H2 - Shortlist / Reject

[Enter shortlist reason -> Shortlist candidate]

Human gate #1: mandatory written reason. AI recommends; recruiter decides.

H3 - Review Interview

[Scroll transcript -> Proceed to final decision]

HR-only view of the full bilingual interview recording.

H4 - Final Decision

[Enter final reason -> Confirm recommendation]

Human gate #2: no auto-hire. Recruiter must confirm with documented reason.

H5 - Audit & Reports

[Scroll audit log]

Full audit trail for compliance - every action is logged with who, when, and why.

Closing (~15 sec)

Dual portals. Evidence-linked AI. Human-in-the-loop. Bilingual interview. Full audit trail. Production adds live Jadarah integration, on-prem models, and production avatar/TTS. Questions?

Quick Q&A

- Is this production? No - vertical slice; integrations are simulated.
- Real AI models? UI simulates inference; production uses on-prem LLM + ASR/TTS in Oman.
- Can AI hire automatically? No - every gate requires human action + reason.
- Why separate portals? Privacy, RBAC - candidates never see HR tools.

If demo gets stuck: Exit portal -> refresh http://localhost:5180/
