Clarifications

Please find our clarification request below:

1- Is the AI Interviewer expected to conduct the interview end-to-end Yes, including greeting the candidate, identity verification (if applicable) Yes (the greeting statement will be providing by OIA and should be customized and modified as per the job level), asking both predefined and dynamically generated questions, engaging in contextual follow-up conversations, evaluating responses, generating the final assessment report, and recommending candidate outcomes? Yes Or is the AI intended to support only specific stages of the interview process?

1. Is the expected interaction voice-only, or should the solution include an interactive AI Avatar (audio and visual)? If an Avatar is required, please clarify the minimum expected capabilities (e.g., lip-sync, facial expressions, gestures, emotional interaction, multilingual support, etc.). Avatar is important and part of the scope and should include all of this (., lip-sync, facial expressions, gestures, emotional interaction, multilingual support, etc.), as mention in point 21

---

1. The sizing table indicates approximately 200 interviews per month. Could you please confirm the corresponding expected volumes for:

- CV parsing There is no specific number
- Candidate matching There is no specific number
- Assessment examinations There is no specific number
- Total number of candidates/applications expected annually About 5000+

1. Does OIA have an existing candidate database (from Jadarah or any legacy systems) that needs to be migrated into the new solution? If yes, please provide the approximate number of candidate records/CVs. Yes, we have an existing candidate database. The number of candidates can be provided later on.
2. Is there an existing Job Description (JD) taxonomy and skills framework that the AI matching engine should align with, or should the bidder propose one? Propose one
3. Which languages should the system support (both user interface and AI capabilities)?
4. What CV file formats should the system support (e.g., PDF, DOC, DOCX)? Yes, PDF, DOC and DOCX
5. What is the expected peak concurrency requirement? Specifically, how many AI interviews are expected to run simultaneously during peak periods, in addition to the estimated 200 interviews per month? There is no specific number; it depends on the business requirement

6. Is real-time video interviewing (candidate on camera) required, or should the AI interview support audio-only, text-based, avatar-based interactions, or a combination of these? All
7. What is the expected average number of job postings published per month? There is no specific number
8. On average, how many CVs/applications are expected to be received for each job posting?
9. Please clarify the expected shortlisting percentage at each stage/round of the recruitment process?
10. Regarding Jadarah, should the proposed solution integrate with the existing Jadarah platform, or is it expected to replace Jadarah entirely? The solution should integrate with the existing Jadarah platform

---

Dear,

Please find below our clarifications.

1. **Jadarah Integration**

Could you please provide a high-level overview of the Jadarah platform, including its technology stack and available integration methods (REST APIs, web services, database integration, etc.)? If available, please share the API documentation.

All API standards can be integrated with Jadarah. Please mention what you can in the proposal.

1. **Deployment Environment**

Please confirm the preferred deployment model (On-Premises, Hybrid, or Oman National Cloud). If infrastructure already exists, kindly provide a high-level overview of the hosting environment.

The preferred deployment model is On-Premises

1. **AI Deployment Requirements**

Should all AI models and data processing be hosted entirely within OIA/Oman infrastructure, or are externally hosted AI services permitted provided that data residency requirements are maintained?

The solution required to be on-premises or hybrid or National cloud and the data should be hosted and processed locally within Oman.

1. **User and Transaction Volumes**

Could you please provide the estimated numbers for HR users, Recruiters, Hiring Managers, Average candidate applications per month, and Peak concurrent users (if available)? Around 130

1. **Historical Recruitment Data**

Will historical recruitment data (CVs, job descriptions, interview records, assessment results, etc.) be available for AI model configuration, validation, and optimization? Yes

1. **Existing Assessment Content**

Does OIA already maintain a question bank, assessment templates, or interview templates that should be migrated or integrated into the proposed solution? Vendor should suggest that

1. **Authentication & User Management**

Please confirm whether the solution should integrate with an existing Identity Provider (e.g., Active Directory, Azure AD, LDAP, or Single Sign-On). Please mention your suggestion and system capabilities in the proposal.

1. **Information Security Requirements**

The RFQ references Information Security appendices and requirements. Could these documents be shared as part of the clarification package? Already shared

1. **Non-Functional Requirements**

Are there any specific performance, availability, disaster recovery, or backup requirements beyond those stated in the RFQ that bidders should consider during solution design?). This will be discussed later

1. **Existing Technical Standards**

Are there any preferred technologies, architectural standards, development frameworks, or integration standards that OIA expects vendors to follow? Please mention your suggestion and system capabilities in the proposal.

Request for Clarification

Clarifications Register

RFQ Number	OIA/5302/2026
RFQ Title	AI-Driven Recruitment Assistant
Submitted by	Rakaiz Development Projects SPC (Branded as FLOWIT)
Date	22 July 2026
Purpose	Points not specified, ambiguous, or inconsistent in the RFQ, required to finalise scope, sizing and compliance

This Clarifications Register is submitted by FLOWIT in relation to RFQ No. OIA/5302/2026, AI-Driven Recruitment Assistant. It covers only points that are not specified, are ambiguous, or

are inconsistent in the RFQ and that are required to finalise scope, sizing and compliance. It does not restate information already provided in the RFQ.

To respond, please complete the OIA Response column against each item and return the register through the E-Procurement portal.

RFQ Reference indicates the relevant clause in the Scope of Work, Terms and Conditions, or Information Security Requirements.

A. Solution Scope

Ref	RFQ Reference	Clarification / Question	OIA Response
A1	Scope of Work, General Requirement 25	The Scope states the avatar interviewer design will be provided by OIA. Please confirm the required avatar format and specifications, the date OIA will provide the design, and whether the avatar interviewer applies to all interviews or to selected roles only.	All interviews and should can CUSTOMIZABLE as per the team request
A2	AI Interviewer items 8 and 14; Technical Evaluation	Candidate personality evaluation is described as an added advantage in one place and listed among the functional requirements in another. Please confirm whether it is within the mandatory scope, and if so, that it will operate as a human-reviewed, non-determinative input.	It's Optional. Mandatory requirement mentioned in the mandatory part
A3	Assessment Exams, Exam Administration	The Scope requires secure exam proctoring to prevent malpractice but does not specify the mechanism. Please confirm the required proctoring approach (for example identity verification, activity monitoring, or lockdown behaviour).	It's required and if you have additional method it will be advantage.

B. Deliverables and Contract

Ref	RFQ Reference	Clarification / Question	OIA Response

B1	Scope, General Requirement 4; Terms and Conditions, Article 10.3	Source code handover is required only where applicable, and Article 10.3 addresses copyright. Please confirm that handover is limited to the customer-specific configuration and accompanying documentation. The applications, agents, workflows and integrations are delivered as configuration on the licensed platform, not as standalone application source code, and the underlying platform source is excluded from handover.	All DOC related should be handover to the team
B2	Maintenance and Support; Terms and Conditions, Article 8.1.2	The Scope states a 3 month warranty plus 1 year support, while Article 8.1.2 states a 12 month warranty. Please confirm which governs the software solution.	3 months post go-live

C. Systems and Integration

Ref	RFQ Reference	Clarification / Question	OIA Response
C1	Mandatory Criterion 3; integration requirements	Please share the Jadarah integration API specification, authentication method, available environments (sandbox and production), and any rate limits.	All API standards can be integrate with Jadarah. Please mention what you can in the proposal
C2	Scope, integration requirements	The Scope refers to integration with Jadarah and HR tools. Please name the additional HR or recruitment systems to be integrated and the available method for each.	ORACLE EBS

D. Hosting and Infrastructure

Ref	RFQ Reference	Clarification / Question	OIA Response
D1	Mandatory Criterion 2; Access Management 6.1.3; SIS 3.8	The RFQ permits On-Premise, Hybrid or National Cloud with data hosted in Oman. Please confirm which option OIA mandates or prefers, whether OIA provides the hosting environment (for example a	We prefer on-premises

		National Cloud tenancy) or the bidder must provision local infrastructure, and who operates high availability, failover and disaster recovery.	
D2	Functional Requirement 11; local hosting	The bidder is to cover all licenses. Please confirm whether OIA mandates or prefers a specific language model, whether OIA provides the GPU or compute for local model inference or the bidder must provision it, and whether the residency requirement extends to model inference.	Keep both options available in your proposal

E. Security

Ref	RFQ Reference	Clarification / Question	OIA Response
E1	Information Security Requirements (four documents)	The four Information Security documents span bidder, OIA and hosting-provider responsibilities. Based on the deployment model selected, please confirm which controls are the bidder responsibility, in particular those referencing physical server operation, storage configuration, and source-code-level testing.	

F. Governance

Ref	RFQ Reference	Clarification / Question	OIA Response
F1	System Requirements 6 and 7	The Scope requires testing for unfair bias and equal performance across user groups but does not define the criteria. Please confirm OIA acceptance criteria and the demographic dimensions to be tested.	Please suggest the criteria from your side
F2	Access Management 6.1.3.3	The Scope requires adherence to the MTCIT AI Regulatory Framework. Please confirm the	Please review the MTCIT AI Regulatory Framework

		specific controls that apply and the responsible assessing authority.	

G. Timeline

Ref	RFQ Reference	Clarification / Question	OIA Response
G1	Timeline; Payment Milestones	Completion is expected within 6 months, upon agreement at kick-off. Please confirm whether a phased delivery across the five models is acceptable, and the required or preferred delivery sequence.	All within 6 months

H. Sizing and Volumes

Ref	RFQ Reference	Clarification / Question	OIA Response
H1	Scope of Work	Expected number of candidates and applicants per month across all channels.	About 5000+
H2	Functional Requirement, Parse CV	Expected number of CVs parsed per month (new uploads and re-uploads), and whether any CVs are image-based or scanned (requiring OCR) rather than text PDF, DOCX or TXT.	About 5000+
H3	Smart Candidate Matching	Expected number of candidate match and scoring runs per month (candidates against open positions).	This process is not only for the users who will apply for the positions, but also for the users who register in Jadarah
H4	Assessment Exams	Expected number of assessment exams administered per month, and the average number of questions per exam.	It depends on the position seniority
H5	Sizing Information; AI Interviewer	The sizing table indicates 200 interviews per month. Please confirm the average interview duration, whether interviews are voice only or avatar and video based, and whether the 200 covers all interview types.	All (voice only or avatar and video based)

H6	Application Scoring	Expected number of application scoring runs per month (candidates against posted jobs).	There is no specific number; it depends on the business requirement
H7	AI Interviewer integration; Smart Candidate Matching item 12	Expected number of write-backs to Jadarah per month (profile updates, results, and interview links).	There is no specific number
H8	Scope of Work	Expected peak versus average monthly volumes, and any seasonal or campaign-driven peaks.	The peak is usually from March to July
H9	Sizing Information; RBAC requirement	Number of recruiters, hiring managers and reviewers, in addition to the 5 to 10 Super Admins stated, for access and capacity planning.	Around 130

Sl. No.	Query Type	Query	
1	Integration	Are there any additional HR systems, ERP systems, Identity Providers, or document management systems that must be integrated?	
2	Integration	Is Jadarah integration synchronous or asynchronous?	
3	Integration	Are webhook mechanisms available?	
4	Integration	Is API Gateway already available?	
5	Functional	Is Jadarah a web application only, or does it expose REST APIs/SDKs?	
6	Functional	Is API documentation available?	Yes

7	Functional	Which technology stack is Jadarah built on?	
8	Functional	What existing HR systems need integration?	ORACLE EBS
9	Functional	What notification channels are expected (Email, SMS, WhatsApp)? Who is responsible for procurement of these?	Add them to the proposal
10	Functional	Will interview recordings be stored?	
11	AI	Can commercial LLMs (OpenAI, Anthropic, Gemini) be used, or must the solution use on-premises/open-source LLMs?	on-premises or national cloud
12	AI	Are models required to be hosted entirely within OIA infrastructure?	
13	AI	Can pretrained models be used?	
14	AI	Will OIA provide historical recruitment data for training/fine-tuning?	
15	AI	Is fine-tuning expected or only prompt engineering/RAG?	
16	AI	Is OCR required for scanned CVs?	
17	AI	What Arabic NLP accuracy is expected?	
18	AI	Are coding interviews mandatory, and for which programming languages?	
19	Infrastructure	Will OIA provide servers, GPUs, storage, and networking?	
20	Infrastructure	Is deployment on-premises, private cloud, or hybrid?	Already mentioned

21	Infrastructure	Which virtualization/container platform is preferred (VMware, Kubernetes, OpenShift)?	
22	Infrastructure	Are GPU specifications already defined?	
23	Infrastructure	Is there a preferred database?	
24	Infrastructure	Hosting model: The RFQ permits on-premises, hybrid, or National Cloud hosting within Oman. However, the technical evaluation separately allocates 10% for on-premises hosting. Please confirm which hosting model will receive full marks.	
25	Infrastructure	Infrastructure responsibility: Please confirm whether OIA will provide the required servers, GPU resources, storage, virtualization platform, WAF, load balancers, monitoring tools, backup systems, and related infrastructure, or whether the bidder must include and supply all components.	Bidder should include it in the proposal
26	Infrastructure	Sizing: The RFQ mentions approximately 200 interviews per month and 5–10 Super Admin users. Please provide peak concurrent interviews, total candidate volume, average interview duration, recording requirements, expected file sizes, and data-retention periods.	There is no specific number; it depends on the business requirement
27	Infrastructure	AI and GPU requirements: Please confirm whether AI inference and model training must run entirely within OIA's local environment, whether external AI APIs are permitted, and whether dedicated GPU infrastructure is required.	
28	Infrastructure	HA and availability: The RFQ requires 24/7 availability, High Availability, and automatic failover. Please confirm the required uptime percentage, HA model such as active-active or active-passive, and the permitted maintenance window.	

29	Infrastructure	DR and backup: Please confirm the required RPO, RTO, backup frequency, backup retention, DR operating model, secondary-site requirements, and whether DR must be warm standby, cold standby, or active.	
30	Infrastructure	Non-Production environments: Please confirm whether Development, SIT, UAT, Staging, Training, and Pre-Production must be separate environments or whether they may be combined within one logically isolated Non-Production platform.	
31	Infrastructure	Data residency: Please confirm whether candidate data, CVs, interview recordings, speech processing, avatar processing, AI prompts, model outputs, and CV parsing must all remain and be processed within OIA's local environment in Oman.	
32	Infrastructure	Jadarah integration: Please provide the API specifications, authentication method, network-connectivity requirements, firewall ports, payload formats, API rate limits, timeout values, and availability of a test/UAT environment.	
33	Infrastructure	Security operations: Please confirm whether OIA will provide or whether the bidder must include SSL certificates, WAF, DDoS/CDN protection, SIEM, SOC monitoring, EDR/antivirus, vulnerability scanning, patch management, monitoring tools, alerting, and monthly security and operational reports.	
34	General	Is there a phased rollout or a single go-live?	
35	Licensing	Are third-party licenses included in implementation cost or quoted separately? Does OIA prefer perpetual or subscription licensing?	
36	Data & Volume	Number of existing candidate profiles to migrate?	Can't mention it at this stage

37	Data & Volume	Expected CV upload volume?	About 5000+ yearly
38	Data & Volume	Current database size?	
39	Data & Volume	Concurrent recruiter and candidate users?	
40	Data & Volume	Interview recording retention period?	
41	Data & Volume	Storage requirements for media files?	
42	Functional	Which CV file formats are expected to be supported?	PDF, DOC and DOCX
43	General	Approximately how many historical CVs will be available for AI training and validation?	
44	General	Are bilingual CVs (Arabic-English mixed) expected to be fully supported?	
45	General	Will OIA provide predefined competency frameworks, skill taxonomies, and job classification structures?	
46	General	Is AI expected to provide only recommendations, or should it automatically shortlist candidates?	
47	General	Who is responsible for the API development for integration? Does OIA already have integration APIs?	

48	General	Is real-time speech-to-text and text-to-speech expected in both Arabic and English?	
49	General	Should interviews be recorded and archived? If yes, what is the required retention period?	
50	General	Will OIA define the candidate scoring methodology and weightages, or should the vendor propose them?	
51	General	Are open-source AI models acceptable if hosted entirely within Oman?	
52	General	Are there any restrictions regarding GPU infrastructure or AI model hosting?	
53	General	If On-Premises, will OIA provide the required server, storage, GPU, and networking infrastructure?	
54	General	Is Multi-Factor Authentication (MFA) mandatory for all user roles?	Yes
55	General	Are penetration testing and vulnerability assessments expected to be conducted by the vendor?	
56	General	Who is responsible for hosting infrastructure?	
57	General	What is Appendix (5) Compliance with Mandatory List?	
58	General	Which recruitment functions already exist in Jadarah, and which are expected to be replaced or enhanced by the AI solution?	
59	General	Approximately how many assessments and question banks are expected during the initial implementation?	No specific number
60	General	Approximately how many concurrent AI interviews should the solution support?	Mention your system capabilities in the proposal

4.0 Scope of Work & Deliverables – CV Parsing Volume Expectation
Comment: The Executive Summary outlines the objective of deploying five AI models, including CV parsing. However, there is no mention of expected usage volume, which is necessary for sizing infrastructure and designing a scalable architecture.
Request: Please confirm the expected monthly or annual volume of CVs to be parsed. Around 50,000 yearly

System Requirements (Page 6) 1. The proposed solution should be compatible with the Jadarah application. Additional reference: 12. The final result should be also shared seamlessly via the integration service to Jadarah Application
The system requirements specify compatibility and seamless integration with the Jadarah application, while also outlining infrastructure and functional requirements. As we are a cloud SaaS platform, our solution is delivered exclusively through a secure cloud environment and does not support on-premises deployment.
Could you please confirm whether a cloud-based SaaS solution is acceptable? As mentioned previously, it should be on-premises or cloud-based in Oman. Additionally, kindly clarify the expected scope of integration with Jadarah, specifically whether Jadarah will manage the front-end/user-facing functionalities and the vendor's responsibility is limited to backend services and APIs, or whether the vendor is expected to develop these functionalities. If the latter, please confirm whether the selected vendor will be provided with the necessary access and technical documentation for the Jadarah system. Both options should be available (front-end and back-end).

Integrate the application with existing Jadarah Application and HR tools.
Request: Please specify the HR tools that the system needs to integrate with. Integration with Jadarah is mandatory, and Oracle EBS is optional

AI Interviewer [Page 9]
Comment: This section describes a dynamic, two-way AI interview system. As an
AI provider, we currently offer one-way AI video interviews to ensure fair, unbiased scoring.
Real-time variation in questions could introduce scoring inconsistencies and biased scoring.
However, if this feature is critical, it can be developed as a paid enhancement.
Request: Please confirm whether one-way AI interviews meet your needs, or if real time two-way interviews are mandatory. As mentioned in the scope, the two-way interview is preferable

Functional Requirement Auto-detect language and apply language-specific parsing rules. [Page 7]
Comment: This section references handling CVs in multiple languages but does not clarify which languages must be supported.

Request: Kindly specify which languages must be supported at launch (e.g., Arabic, English) and any expectations for future multilingual support. Initially, English and Arabic are mandatory, but you should consider the other languages as the system is international.

Sizing Information [Page 16]

Comment:

The RFQ specifies 5 to 10 users under the “Super Admin” role. However, since the Jadarah platform covers all companies under OIA, it is unclear whether the AI driven Recruitment Assistant will be used exclusively by OIA, or whether other companies under OIA will also access and use these features.

Request:

Please clarify whether the proposed solution will be licensed for OIA only, or if all companies under OIA using the Jadarah platform will have access to the system. If the latter, please confirm how this aligns with the stated Super Admin count of only 5–10 users. What is the total number of users?

Super admin for OIA only

Additional questions:

The document does not specify the expected number of assessments or candidate tests that will be conducted on a monthly or annual basis. This data is essential for planning capacity, infrastructure, and licensing needs.

Request:

Kindly confirm the estimated number of assessments/tests that are expected to be conducted (monthly or annually), including any expected peak load during recruitment campaigns or graduate programs. Please mention the average in the proposal.

Query	Response
1. Under System Requirements Item 10, the RFQ requires the bidder to specify installation requirements such as hardware, software, and infrastructure. Could OIA clarify whether the hosting infrastructure (e.g., GPU/CPU servers, virtual machines, local cloud environment) will be provided directly by OIA, or if server hardware procurement costs must be included in the vendor's commercial price proposal?	If its cloud, Please add the cost of the hosting in the proposal. If its on prem OIA can validate if it can fit in OIA datacenter
2. Stage 1 Mandatory Criteria Item 2 requires the solution and all candidate data to be hosted and processed locally within Oman. Could OIA clarify whether the underlying AI models (for CV parsing, interviewing, and scoring) must be hosted locally on-premise/local cloud, or if third-party commercial AI APIs are permitted under specific data protection controls?	Any cloud solution must be hosted and processed in Oman. Please add in the proposal which solution will be on prem or cloud . Please mention the architect

3. The RFQ mandates seamless integration with OIA’s existing "Jadarah" platform. Could OIA provide the technical specifications (e.g., REST APIs, Webhooks, SOAP) and data schemas supported by Jadarah?	All API standers can be integrate with Jadara. Please mention what you can in the proposal
4. Will OIA or its Jadarah system vendor provide dedicated API documentation and a Staging/Sandbox environment during the project implementation phase to facilitate integration testing?.	the integration depends on the AI recuitment assistance data flow.
5. General Requirements Item 25 states that the avatar design will be provided by OIA. Could OIA clarify whether this will be provided as ready-to-use 3D rigged character files/assets, or if the vendor is required to build and render the 3D interactive avatar engine based on OIA’s brand guidelines/2D images?	please mention your system capapilities in the proposal whether its 2d or 3d
6. The AI Interviewer requirements specify dynamic two-way dialogue and real-time interactive conversations. What are the expected network bandwidth and latency thresholds for real-time text-to-speech and voice processing over standard browser connections?	real time processing . Please mention your system network bandwidth and latency thresholds capabilities on the proposal
7. General Requirements Item 4 specifies the handover of the entire original source code to OIA. Could OIA confirm whether this requirement applies strictly to the custom integration code, web application, and wrappers, or if it also extends to the proprietary core weights/source code of underlying foundational AI models?	All projects related Docoments should be handover to the team
8. General Requirements Item 15 states that OIA will run multiple security assessments and the bidder must resolve all findings prior to go-live. Will these assessments be conducted by OIA's internal InfoSec team or a third-party auditor, and what is the target timeframe allocated between the assessment report and required remediation closure?	This is OIA to decide . Vendor should close the security points when they receive them
9. While the sizing table lists approximately 200 interviews per month, what is the expected maximum peak concurrency (e.g., maximum simultaneous AI interviews or assessment exams occurring at the	mentoin your system capabilities in the proposal

exact same hour) to ensure accurate server and throughput sizing?	
10. Section 2.0 Item 9 mandates continuous performance monitoring, including drift detection and accuracy tracking. Could OIA clarify whether automated model retraining pipelines are expected to run locally within the provided infrastructure, or if retraining will be managed via offline batch updates during scheduled maintenance windows?	Mention your suggestion and system capabilities in the proposal
11. To accurately size the database and vector search engine (for semantic candidate matching), what is the estimated total historical volume of candidate resumes and profiles currently residing in the Jadarah database that will need to be indexed upon initial deployment?	This can be provided later on
12. Under Section 5.3, secure exam proctoring and monitoring are required to prevent malpractice. Does the proctoring scope require continuous real-time video/webcam streaming and AI visual analysis, and what are the allowable client-side bandwidth limits for candidates taking assessments externally?	Mention your suggestion and system capabilities in the proposal
13. Section 2.0 Item 2 requires 24/7 availability with High Availability (HA) and automatic failover. Could OIA define the specific Recovery Time Objective (RTO) and Recovery Point Objective (RPO) targets for both the application layer and the AI model inference engines in the event of a primary site failover?	This can be provided later on

---

	Contractor Clarification	OIA Response	C&P Comments
	JADARAH AND INTEGRATION		

1	Please share the technical profile of the Jadarah application (platform/vendor, hosting location)	(confidential/confidential/ on premise)
	confirm that documented integration interfaces (REST per the OIA API Security Requirements), API documentation, and a test/UAT environment will be made available to the awarded vendor at project kickoff.	The Docomentation will be available depends on the what the AI-driven Recruitment Assistant system data needs from Jadara system.
2	For internal HR users, is integration with OIA's identity provider (SSO/Active Directory with MFA) required?	yes
	For candidates, is identity fully managed by Jadarah, with the AI platform consuming a candidate token/ID?	yes
	HOSTING AND INFRASTRUCTURE	
3	Who provides and owns the hosting infrastructure (servers, GPU capacity for AI inference): OIA's data centre, or should the bidder include infrastructure supply in the commercial offer? If a national cloud is preferred, please confirm the approved provider and who holds the hosting contract.	On-premises is preferable, but keep both options available
4	Should all AI model inference run fully within Oman (on-premise or national cloud) with no use of AI services hosted outside Oman? Our proposed design assumes fully in-country inference; we ask to confirm this is the required posture.	(on-premise or hosted and processed within national cloud)
	VOLUMES AND SIZING	

5	The sizing table states approximately 200 interviews per month and 5–10 super admins. Please also indicate: expected CVs/applications per month, peak concurrent interviews and exams, number of recruiter/HR user accounts, and approximate job postings per month.	Provide the average in the proposal	
	What is the expected language split for CVs and interviews (Arabic vs English)	Initially, English and Arabic are mandatory, but you should consider the other languages as the system is international.	
6	Are interviews required to run fully in Arabic, fully in English, or mixed within one interview?	All options should be available	
	AI INTERVIEWER AND AVATAR		
7	The RFQ states that the avatar design will be provided by OIA. Please confirm the intended format (2D illustration vs 3D character assets), whether one avatar or multiple are required, and whether Arabic lip-sync and a specific voice profile (gender, dialect) are expected.	Provide what you have in the proposal	
8	Are AI interviews to be video- and audio-recorded?	Yes	
	If so, what retention period applies to recordings and transcripts, and are there proctoring requirements during interviews (identity verification, environment monitoring)?	Yes, and the HR team can view them. As for now Hr teams doesn`t need any retention on them and keep the retention optoin available in the system	Retention period for recordings/transcripts — not answered

		AI-driven Recruitment Assistant system provide the best practice way to (identity verification, environment monitoring)	doesn't confirm whether real-time identity verification or environment monitoring is required during the interview itself
9	For live coding sessions in technical interviews, which roles, programming languages, and evaluation depth (syntax correctness vs executed test cases) should be supported?	Both options should be available	
	ASSESSMENT EXAMS		
10	Does OIA expect the bidder to supply ready-made question banks (IQ, technical, behavioral) in Arabic and English, or to provide authoring tools with which OIA creates its own content, or both?	Both options should be available	
11	If banks are supplied, are specific psychometric standards or validation evidence required?	Provide what you have in the proposal	
	What level of exam proctoring is required: browser lockdown, webcam monitoring, AI-based malpractice detection, or human-reviewed flags?	Yes, all; if you have additional, please provide in the proposal	
	DATA AND AI GOVERNANCE		
12	Will OIA provide historical recruitment data (anonymized CVs, past screening outcomes) for model calibration and the bias/fairness testing required by the RFQ? If not, is calibration on synthetic and public data during implementation acceptable?	yes . There is should have a way the team can validate the	

13	Regarding the MTCIT AI Regulatory Framework: does OIA require a specific conformity documentation set (model cards, data-lifecycle records, human-oversight procedures) as a named deliverable, and will OIA's compliance function review these during delivery?	MTCIT has the Oman regulations regarding AI. Please search about General Policy for the Safe and Ethical Use of Artificial Intelligence Systems in MTCIT website	
	COMMERCIAL AND EVALUATION		
14	Please confirm the schedule-of-price service lines: should Annual Software Assurance and Annual Support each be quoted for one (1) year from launch (alongside the 3-month warranty), with subsequent years by renewal? Please also confirm the intended distinction between 'Warranty Cost per year' and 'Annual Support'.	Revert to the RFQ	
15	Please confirm that no bid bond is required at submission, and whether any performance bond or retention applies after award (percentage and validity).		No Bid Bond is required . For the performance bond and retention will be discussed with awarded bidder only
16	For the SME/Riyada criterion (10% of the technical score): must the bidding entity itself hold the Riyada card, and is a copy of the card the required evidence?		No, the bidding entity is not required to hold a Riyada card as a mandatory requirement for participation in the tender. However, preference will be given to Riyada companies under the SME/Riyada criterion, in line with applicable Government instructions.

			Where a bidder wishes to claim the applicable preference/technical score under this criterion, a valid Riyada card must be submitted as supporting evidence as part of the technical proposal.
17	For mandatory criterion 1 (minimum one successful implementation with similar scope): would a successful government AI implementation of comparable technical scope (AI document intelligence and Arabic conversational AI for a government authority) satisfy this criterion, or is recruitment-specific AI deployment required?	Provide what you have in the proposal	
18	Does WCAG 2.0 compliance apply to candidate-facing interfaces only, or also to internal recruiter and admin interfaces?	Both
